Skills

Languages: JavaScript (ES6+), TypeScript

Frontend: React, Next.js, Component-Based UI Architecture

Backend: Node.js, Express, NestJS, REST APIs, GraphQL

Databases: PostgreSQL, MySQL, MongoDB, SQL, NoSQL

Performance & Security: Caching, Rate Limiting, Authentication & Authorization

Cloud & DevOps: AWS, Docker, CI/CD (GitHub Actions)

Testing: Jest, Cypress

Other: WebSockets, IPFS, Blockchain Integrations, Git-Based Workflows

Experience

APRIL 2023 - PRESENT

AutomatedPros, Dubai – *Full Stack Engineer*

- Designed and implemented REST APIs in Node.js powering a blockchain-based platform using IPFS for secure, decentralized file upload and storage.
- Led the frontend development of a project management platform similar to Jira, integrating smart contracts as backend infrastructure.
- Built and maintained a SaaS platform for restaurants, supporting real-time order displays, CRUD operations, instant notifications, and third-party integrations.
- Currently developing a no-code website builder using React, enabling users to create, configure, and manage websites through a modular, component-based interface.
- Collaborated closely with product and engineering teams to design scalable architectures and deliver production-ready features.

APRIL 2022 - MARCH 2023

Kutia LLC, Kosovo – *Full Stack Engineer*

- Contributed to the backend development of a mobile metaverse game ("Realm"), building systems such as the in-game store, virtual currency, and referral code mechanisms.
- Improved backend performance and security by implementing caching layers, rate limiting, and request validation.
- Worked on a SaaS platform for tenant management, including features for personality-based tenant matching.

- Mentored junior developers through regular 1:1 sessions, code reviews, and hands-on technical guidance.

FEBRUARY 2019 - APRIL 2022

Rhenum LLC, Kosovo – *Full Stack Engineer*

- Built production React applications and custom themes backed by headless CMS solutions for local businesses.
- Designed and implemented a real-time Taxi Dispatch System using WebSockets to enable reliable communication between native mobile applications and administrative dashboards.
- Contributed to the end-to-end development of an HRM platform, from initial architecture to production deployment.
- Developed a Learning Management System (LMS) using Next.js and MUI to manage and deliver educational content.
- Created “Shield,” a monitoring platform for large shopping mall infrastructure, tracking water pipelines and electrical systems.

Education

SEPTEMBER 2020 - EXPECTED 2026

University of Business and Technology, Prishtina – *Bachelor's Degree in Computer Science and Engineering*
