SUMMARY

Full-stack engineer with 7+ years owning delivery of SaaS, automation, platform, and real-time products. Takes ambiguous requirements through architecture, implementation, integrations, and production release while partnering with product and engineering teams. Current with AI-enabled product development, modern automation patterns, and evolving engineering tooling; experienced mentoring developers and raising code quality through reviews and practical technical guidance.

TECHNICAL SKILLS

Languages & runtime: JavaScript (ES6+), TypeScript, Node.js, Rust (personal projects)

Frontend: React, Next.js, Vue, component architecture, modular UI systems

Backend & APIs: Express, NestJS, REST API design, GraphQL, CRUD workflows, asynchronous services

Data & infrastructure: PostgreSQL, MySQL, MongoDB, SQL/NoSQL, AWS, Docker, CI/CD, GitHub Actions

Quality, security & performance: Jest, Cypress, WebSockets, caching, rate limiting, authentication/authorization, request validation

AI & automation: AI integrations, workflow automation, third-party API orchestration, reusable integration patterns

Architecture & delivery: System design, debugging, code review, technical documentation, production deployment

PROFESSIONAL EXPERIENCE

AutomatedPros | Full Stack Engineer | Dubai, UAE | Apr 2023–Present

- Own end-to-end feature delivery across SaaS and automation products, translating requirements into architecture, implementation, integrations, testing, and production releases.
- Build and evolve an automation platform that coordinates workflows across dozens of third-party services, creating reusable integration patterns for varied customer use cases.
- Deliver AI-enabled solutions and workflow capabilities across the platform, integrating current AI tooling into customer-facing automation.
- Lead cross-functional engineering across multiple products, aligning frontend and backend systems, reusable components, APIs, real-time operations, and external integrations.

Kutia LLC | Full Stack Engineer | Kosovo | Apr 2022–Mar 2023

- Owned backend feature delivery across game and tenant-management products, taking work from design through implementation and release.
- Improved service reliability, performance, and security through caching, rate limiting, and request validation.
- Mentored junior developers through regular 1:1s, code reviews, and hands-on technical guidance while helping raise implementation quality across the team.

Rhenum LLC | Full Stack Engineer | Kosovo | Feb 2019–Apr 2022

- Worked across architecture, implementation, and production deployment for business applications and reusable React/CMS solutions.
- Designed real-time communication between mobile clients and operational dashboards using WebSockets.
- Contributed to HRM and learning platforms from core architecture through production delivery.
- Built monitoring capabilities for physical infrastructure operations.

INDEPENDENT ENGINEERING

Stemmer | Rust | Personal project

- Built and distributed a cross-platform desktop application around a Rust core, integrating ML models, GPU acceleration, custom models, and CLI/package distribution.
- Improved execution-provider selection and Apple Silicon/CoreML handling; release testing reported up to ~40% faster end-to-end splits depending on hardware.

Lunie | Self-hosted workflow automation | Personal project

- Designed and built a self-hosted workflow automation tool with dynamic workflow definitions, local execution, and run history; documented the product and published a demo.

EDUCATION

University for Business and Technology (UBT), Prishtina | BSc in Computer Science and Engineering (in progress)
